

SPORTSBASE

“The multi purpose solution”

In 1980, Egripment introduced first SportsDolly specially designed for this purpose, anywhere in the world. Since that time it has been used and proved itself during all the World's great sports events, including all Olympic Games.

As expected, after a few years, we saw many copies of the original Egripment idea. That is normal, because every idea that is successful will be copied.

Egripment considers this as a complement to our creativity and ingenuity. But do these copies have the traditional Egripment quality? We do not think so.

Because the camera techniques have changed in the past several years, the camera operator has changed to a new generation, and the sports became much faster, we have decided to upgrade our Sports Dolly to a completely new design.

The **SPORTSBASE** is constructed from a super lightweight, 100% aluminium base, consisting of a modular frame with a solid seat support in the middle. You can extend each of the four legs of the frame individually to create an optimal stabilization when you increase the load on the seat.

Seat support

The camera swivels in the middle of the platform to allow for maximum pan possibilities.

The camera cables can be fed through the center of the seat swivel support in such a way that the cables will not interfere with the pan movement.

Due to the “modular” technique that Egripment also used for the design of this SPORTSBASE, the seat support can easily be adjusted to be used between the seats of a stadium or arena.

Frame

The SPORTSBASE is equipped with four legs. Each leg consists of two parts so that you can use a short or a long version base frame. Each leg can be leveled individually. When you use the frame without the platforms, you can use the base frame as a support for your legs.

Platform

The complete square platform exists of four equal quarters which you can use as individual parts. In this manner you can set up the SPORTSBASE as a triangle (180 degrees) or a full square (360 degrees) to best fit existing space limitations.

SPORTSBASE

Transport

Egripment designed a special trolley to carry all of the parts of the SPORTSBASE. This way it will be easy to transport your SPORTSBASE from the transport track to the location where it will be set up for use.

Safety

A specially designed set of safety cushions completes the SPORTSBASE package.

The new SPORTSBASE is a multi-purpose solution for almost all possibilities in and around stadiums.

Specifications	Art.: 218/SB SportBase
Materials	100% Aluminium
Min Camera Platform height	31 cm / 1 ft
Max Camera Platform height	Individual due to use of Camera Risers
Platform size	0,9 m / 2,95 ft
Max sizes legs	1,43 x 1,43 m / 4.5 x 4,5 ft
Weight (incl. Trolley)	86 kg / 189 lbs
