

205-A Remote Head

Egripment's classic Head
for the Modern Size Smaller Cameras

Evolution with the Passion and Style
that Egripment is known for worldwide

The Egripment 205 Remote Head is our latest Remote Head in the extensive line of Egripment Remote Camera Head and Controls. Following in the footsteps of our very successful and well regarded line of Remote Camera heads, Egripment now announces the development of a much smaller and lighter Remote Head designed for use with many of the current smaller professional cameras and lenses.

The 205 Remote Head offers the same exacting precision and smoothness of motion as our larger 306 Head does, in a much smaller package. With the reduction in camera sizes, it is not always necessary or desirable to use our larger heads, so we now offer the 205 Head to fill this need in our line up.

Note that this head can be mounted right side up or inverted, and further you can mount the camera platform on the OUTSIDE of the head rather than inside as is customary, if desired for special applications. With its extensive line of mounting options, such as standard 28mm lightning spigot to fix to a standard clamp, Mitchell or 100mm bowl fitting for adapting it to a standard tripod, the 205 Head is an economical head for many different purposes.

205-A Remote Head

The 205 Remote Head is replacing our very well-known Mini Shot and Super Shot Heads in the Egripment Product Line. It is fully compatible with all of the other products within our line of Remote Systems. This analogue version of the 205 Head is being utilized as a Stand Alone Remote Head.

The compact size of the 205 Remote Head, combined with its power, flexibility and sophistication, makes it the perfect remote head for all-sporting events, commentary camera positions, music concerts, and videoconferences. The 205 Head is indeed the ideal solution anywhere a small head is required that will not obstruct the view of the spectators or conference delegates. Although it is slightly larger than the MiniShot it is replacing, it is still very compact and can handle a much greater camera load. It also offers more versatility than the MiniShot head allowed.

Specifications	Art.: 205-A	
Height:	29.4 cm	11.57 inch
